01

EASILY DOWNLOAD THE APP

Easily download the app
And connect with millions of other drivers on the road

02

IN CASE OF FATIGUE SIGNS- THE APP WILL ALERT YOU

The app uses the camera of the mobile to detect the driver's alertness, monitors the blink of an eye, lowers the head suddenly, and detects non-focus on the road. In a situation where the app detects fatigue, the app knows how to dial in parallel with several drivers who are on the road on the same shift and connected to the app, and the first assistant driver who answers the call will talk to the driver to the nearest stop to which the app will navigate
